About Me

I am a computer engineer from Sandnes, Norway. I have a bachelor's degree in Computer Science, and I handed in my master's thesis this spring. For my master's thesis I wrote about fake news detection in social media using neural networks. The thesis is available on github: `https://www.github.com/henmja`. I have previously worked as a production operator, seller, gardener, and as a warehouse worker. Presently, I am working as a control technician for Nærbø Kyllingslakt. There, the tasks are IT-related (f.ex. control the assembly lines). As a person, I am social, hard-working and honest.

Skills

Python

Java

MATLAB

Go

Javascript

PHP
